Lightning Risk Assessment

The Lightning Stops Here!

**Complimentary Service for Alliance Insurance Group
Commercial and Industrial Customers**

Incidents and accidents involving lightning strikes are on the rise and according to the most recent study done by **Berkeley**, lightning is expected to increase by 50% sometime during this century. Lightning is increasing and is becoming stronger and more frequent. Additional studies have substantiated this and increased explosions have confirmed it. A single incident can cost a company millions of dollars, prolonged downtime and regulatory fines, as well as undesirable scrutiny and negative press.

A direct or a nearby lightning strike can cause an explosion, fire, structural damage, destroy equipment and sensitive electronics, halt production and operations, and worse, end in death. A single strike has been known to cause losses and/or cost a company anywhere from thousands to millions of dollars' in destruction, liability and regulatory fines. In one case, the numbers were over \$1 Billion, with multiple deaths and ended with the company closing.

The solution is simple and is based on a combination of technologies which can include lightning strike protection, grounding and surge protection.

Lightning Eliminators' **Complimentary Lightning Vulnerability Assessment** will provide a high level review, conducted by team of engineering experts, of your current protection systems and risk factors and will also include the latest isokeraunic and flash data for your area.

Lightning Eliminators has been providing patented lightning protection services for over 43 years in over 80 countries. It just takes a few minutes to get your complimentary assessment from one of our solution analysts. **Contact us today for a complimentary risk assessment.**
